Elsight Enters New Cooperation with monogoto to Expand Halo Platform’s Cellular Reach

[Elsight Limited](#) (ASX: ELS), an Australian listed company that produces advanced communication technologies for real-time data transmission over cellular networks in mission-critical environments, announced today that the company has entered a new cooperation with [monogoto](#) Programmable Cellular, an Infrastructure as a Service (IaaS) provider that enables Enterprises, SMBs, MNOs and MVNOs with over-the-top cellular connectivity and global coverage with multiple identities.

In response to a growing need for reliable and secured connectivity in AI and IoT environments, Elsight’s reliable, high bandwidth data transmission technology that operates over multiple IP links applies unique architecture that allows for easy integration within any IoT device for seamless connectivity on-the-go. The company’s latest development, the **Halo** communication platform, is equipped with the world’s most compact, next-generation bonding technology, enabling always-on connectivity. Available as either a standalone external device or a lightweight internal board, Elsight **Halo** provides the highest bandwidth, highly secured communication for the transmission of live data, in real-time, from everywhere and to anywhere, while on-the-move, or on-the-ground.

The **Halo** 2000/4000 features multi-SIM cellular modules, built-in WiFi, a video encoder, enabling seamless data connectivity. Its ultralight weight, tiny size, low power consumption and the lowest heat index, combined with the industry’s best benefit-cost ratio (BCR) - maximizes your reach with optional video transmission capabilities, while providing decision makers with the complete picture of any scene, unmatched security, transmission, and highest availability for any of your transmission needs.

Elsight’s new cooperation with **monogoto** will enable **Halo**’s cellular reach to further expand, regardless of the challenging, dynamic or remote environment the platform is used in. In addition, monogoto platform enhances the security and control over the signaling and the SIM. Elsight will integrate **monogoto**’s secure SIM cards into the **Halo** board, allowing **Halo** users to benefit from global connectivity in over 180 countries and a full self-service console that

promotes SIM/network-based security and policy enforcement. And, as the programmable cellular platform within each SIM is based on a single unified management console, it can be extended or customized by utilizing RESTful API functions.

The cooperation between **Elsight** and **monogoto** will therefore significantly improve upon **Halo's** already revolutionary offering. With **monogoto** inside, **Elsight's Halo's** benefits will only scale to reach new real-time data and video connectivity heights, with reduced data use cost improved billing, superior cross company SIM management and much more.

"It's an exciting time for monogoto as we entitled to influence the shape of the IoT Connectivity future," said Itamar Kunik, Chief Executive Officer for monogoto. "We believe that this cooperation with [Elsight](#) will extend Halo platform global footprint and in combination with monogoto's Secure Core and SIM, will open great opportunities for both companies going forward."

"With monogoto's powerful platform embedded and tightly integrated into our Halo's offering - our customers will be able to enjoy a brand-new service level, not available before. Such a monogoto inside improvements will enable our customers to enjoy the best possible company-wide SIM management, reduced data cost and dramatically improved accounting and billing capabilities" stated Nir Gabay, CEO of Elsight.

Elsight and monogoto both are exhibiting at the Fira Barcelona Gran Via, **Elsight, Hall 5 Stand 5E61, monogoto, Hall 8.0 Stand 8.0C12** at the [MWC19 Barcelona](#) the week of February 25th-28th, 2019. The conference will feature over 2,400 companies and an expected 107,000 attendees. As such, it is a most fitting location to announce this new and exciting cooperation.

About Elsight

Founded in 2009 and public on ASX since 2017, Elsight's (www.elsight.com) cutting-edge real-time, adaptive data transmission technology was designed to address the most demanding connectivity needs. The platform currently presents an unmatched level of reliability, lowest latency, and highest adaptive bandwidth over cellular networks in the form of ideally secure milspec solutions for defense and civil usage.

About monogoto

[monogoto](#) Programmable Cellular is an Infrastructure as a Service (IaaS) enabling enterprises, SMBs, MNOs and MVNOs to launch many cellular use cases, from IoT connectivity to travel SIM, digital wallets and more. In addition, monogoto IaaS can solve specific operators' needs, such as global roaming, IMSI donations, HLR proxy, tactical steering and private LTE.

monogoto is the first company to expose true self-service via a console, APIs and native mobile app for all network components, including: SIM cards, GGSN, HLR, HSS, SMSC, SCEF and

MQTT. Each customer is provided with a secure SIM and core with advanced firewall capabilities.
